

Telnexus Cloud Door Controller

Greet visitors from any phone connected to your communication network and allow entry with the simple press of a key. Great for unattended lobbies, front doors, gates, warehouse doors, or anywhere visitors may require assistance. The Telnexus Cloud Door Controller gives security professionals a unique opportunity to deploy access control applications at a breakthrough retail price of \$500 (USD).

The Telnexus Cloud Door Controller is a well-developed Voice over Internet Protocol (VoIP) endpoint with access control functions, including door release and RFID key support. Using its built-in Ethernet interface and the standard SIP protocol, the Telnexus Cloud Door Controller may be integrated into any digital business telephone network.

Using the built-in Power over Ethernet (PoE) capabilities, only a single Ethernet cable is required for both communication and power.

With the optional Telnexus Cloud service, the Telnexus Cloud Door Controller may be used on a stand-alone basis. When connected to the public Internet the Telnexus Cloud Door Controller may be used to for access control at a remote facility – no additional is required.
